

LED Station Lighting Replacement for UO-4 Phase 1

CLIENT

Ontario Power Generation

LOCATION

Courtice, Ontario

PROJECT DESCRIPTION

The Station Lighting replacement was a major capital improvement program performed by Ontario Power Generation to replace over 3,500 station light fixtures with energy efficient and modern LED lamps.

B&M SCOPE OF WORK

Black & McDonald's (B&M) scope included replacement of over 3,500 LED light fixtures throughout the UO-4 station and plant including critical areas such as the irradiated fuel bay, the reactor building and the turbine hall. The lighting replacement work involved seamless coordination between B&M's crew station operations to ensure completion with minimal operational disruptions.

BENEFITS TO THE CLIENT

This project is in its second year, event free and highly successful.
